ZigZag

Don't be constrained by straight lines.

Curves, corners and circles,
our ZigZag does it all.

ZigZag is a flexible linear LED that can seamlessly follow architectural bends and curves. Our ZigZag is a problem solver; it can do what others can't. From illuminating angled inbuilt seating, bending around circular pillars, spiraling up and down steps and framing doorways to following the curves of a pool edge, the possibilities are endless.

With no hot spots, direct uniform illumination and an IP68 rating, it's fit for almost anything. The possibility starts with you. Our ZigZag is up for the challenge.
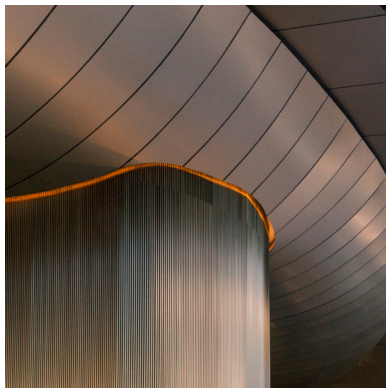

Discerning Design

ZigZag has been designed to integrate seamlessly into architectural spaces by providing a continuous line of light. With no hotspots or visible LED diodes, ZigZag is designed for direct view and uniform illumination.

ZagZag is provided in a standard white PVC finish but is also available in black, yellow, red, green and blue for applications like stage lighting, signage or coloured trims. Designed to withstand harsh conditions, ZigZag is resistant to dust and discolouration for easy maintenance.
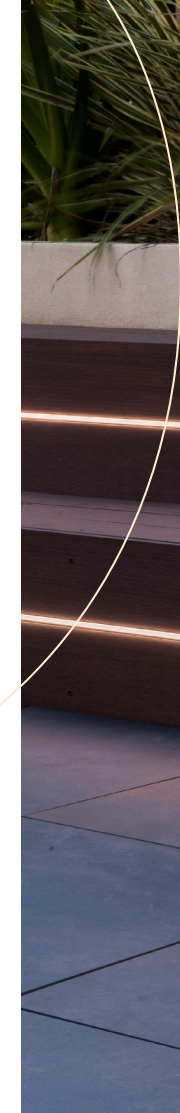

Perfect for Exteriors

ZigZag can handle almost anything, even the harshest weather conditions. Available in IP67 or IP68, ZigZag can be used uncovered outdoors, making it the perfect choice for path, seating or garden lighting. With UV, solvent and chlorine resistance, it can even be used under the coping of pools, spas and water features. Did we mention that it's also flame retardant?

ZigZag is tough enough to withstand exposed locations and is an excellent choice for your next residential or public landscape project.
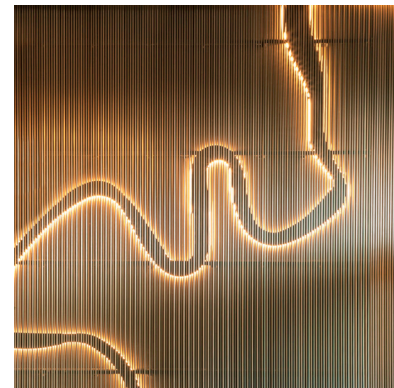

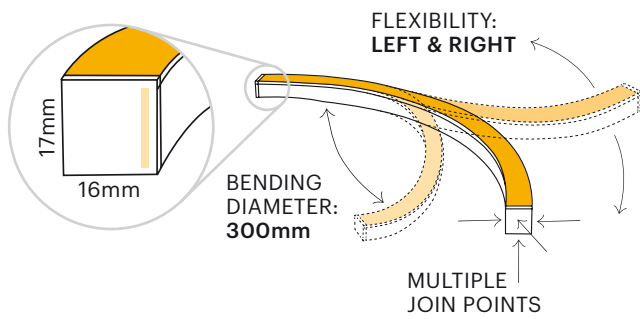

Ultimate Flexibility

How flexible is it? Our ZigZag is so flexible it can be curled into a tight spiral with your choice of either vertical or horizontal bending.

Need a continuous line of light around a sharp corner? No problems, with a range of injection-moulded, snap and swivel connectors our agile ZigZag loves corners.

Available in a variety of bendable and straight mounting profiles from recessed to surface mounted, our ZigZag is customised to suit your project's needs.

No hot spots. ZigZag delivers a continuous line of illumination, even when viewed front on.

Two Size Options
ZigZag or ZigZag*Mini*

With both offering the option of either horizontal or vertical bending.

Need long lengths? No problem
ZigZag is custom made in our Brisbane workshop.

With a variety of join angles and connectors, from injection-moulded to swivel or snap, ZigZag delivers seamless joins to span extra-long distances.

Tough Self-Cleaning Coating
Flame retardant, UV, chlorine and solvent resistant

Say goodbye to sticky and dusty lighting surfaces, even outdoors, using ZigZag's nano-technology coating. Tested in harsh conditions for 120 days.

PVC Casing Colour Options
White supplied standard.
